PROFESSIONAL SUMMARY

I have been specializing in full-stack web development and IoT integration for about 5 years, using Laravel, CodeIgniter 4, PHP, JavaScript, Python, and SQL as my primary tools. My focus is on MVC architecture, Role-Based Access Control (RBAC), and connecting devices such as ESP32, Arduino, and Raspberry Pi to larger systems. I enjoy debugging more than most people tracing the root cause of a problem rather than just patching up the visible symptoms. I've also led a small team with a "wake up, speak up, stand up" culture, where challenges are addressed early on rather than bottled up until the deadline is looming. My principle is simple: the code I write must still make sense to anyone who reads it including myself even if it's revisited months later.

TECHNICAL SKILLS

Frontend	HTML5, CSS3, JavaScript (ES6+), Tailwind CSS, Bootstrap, responsive design
Backend	PHP (native, Laravel basics), Python, REST API design, MySQL
Tools	Git & GitHub, VS Code, Figma (basic), Postman, XAMPP
IoT / Hardware	Arduino, ESP32, serial communication, basic sensor integration
Cross-Disciplinary	CNC programming (MasterCAM), technical drawing interpretation, welding (TIG/MIG/Argon, 1G–5G)
Languages	English (Limited Working), Indonesian (Full Professional), Javanese (Native or Bilingual)

PROJECTS

SIM PLC

Multi-role educational platform with gamification & approval workflow

Stack: CodeIgniter 4, PHP 8.1, MySQL, Tailwind CSS • [Live Demo](#)

- Digitized manual processes for 500+ members across 6 divisions — enrollment, approvals, certificates, and fundraising.
 - Engineered idempotency-protected point system preventing double-award exploits in concurrent admin operations.
 - Automated certificate generation with crypto-token verification; dual-channel notification pipeline (Email + WhatsApp API) processing 500+ daily messages.
-

ConexPro

Document control & project management for engineering teams

Stack: Laravel 11, PHP 8.2, MySQL, Tailwind CSS • [repositories](#)

- Centralized 500+ technical documents across 15+ projects with automated versioning & audit trails.
 - Built 4-tier approval state machine (Draft → Review → Approved → Published) with polymorphic history tracking for ISO compliance.
 - Full-text search indexing 10K+ documents (<200ms); reduced approval cycle from 5–7 days to 24–48 hours.
-

Electra

Electricity billing & prepaid token management platform

Stack: Laravel 9, PHP 8.1, MySQL, Blade • [repositories](#)

- Digitized end-to-end electricity billing: metered kWh calculation, tariff management, and per-month PDF invoice generation.
 - Engineered 4-stage payment confirmation workflow (Pending → Awaiting Verification → Paid) with admin-side proof-of-transfer review and cascade-delete rollback.
 - Built prepaid token marketplace with stock management; dual-role access control (Admin/User) via custom Laravel middleware and Spatie Permission.
-

WORK EXPERIENCE

Quality Control Inspector

*Kotawaringin Barat,
West Kalimantan*

PT. Astra Agro Lestari

- Performed on-site quality inspections on production output and verified compliance with operational standards.
- Documented inspection results and flagged deviations for the engineering team to act on.

CNC Machine Operator

*Cibinong,
Bogor*

CV. Usaha Mandiri

- Operated CNC milling and lathe machines, reading technical drawings to produce parts within tolerance.

- Wrote and modified short CAM programs in MasterCAM for routine machining jobs.

Mechanical Maintenance Technician

*Singkup,
Central Kalimantan*

PT. Bukit Palem

- Independently produced technical drawings and blueprints for new production tooling and modifications.
- Executed designs into finished parts through metal fabrication, welding (TIG, MIG, and Argon across 1G to 5G positions), and manual lathe/milling operation.
- Carried out troubleshooting, setup, and routine maintenance on core production machinery to minimize downtime.
- Ensured all tooling and mechanical processes complied with industrial K3 (health & safety) standards.

EDUCATION

Universitas Bina Sarana Informatika

Depok, West Java
Expected 2026
GPA: 3.75 / 4.00

Bachelor of Applied Science (S1), Software Engineering

Relevant coursework: Web Development, IoT Programming, Mobile App Development, Database Systems, OOP.

- Working on final project in the web development track.

SMK Muhammadiyah 2 Sragen

Sragen, Central java
Graduated May 2015
Final mark: 80.5 / 100

Vocational Diploma, Mechanical Engineering (Machining)

- Focus areas: CNC machining, CAM programming with MasterCAM, manual milling and lathe, and welding.

WHY A MECHANICAL BACKGROUND MATTERS FOR WEB DEVELOPMENT

-
- Comfortable reading and producing technical documentation - useful for API specs, internal handover docs, and onboarding.
 - Trained to debug physical systems where you cannot just "console.log" - translates well to production debugging discipline.
 - Domain understanding of manufacturing, IoT, and industrial workflows - relevant for companies building software for those verticals.

CERTIFICATIONS & CONTINUOUS LEARNING

- BNSP · LSP Universitas Bina Sarana Informatika Analis Program (Program Analyst)
- Cisco Networking Academy Introduction to Cybersecurity
- Cisco Networking Academy Python Essentials 2
